Summary

Dynamic and results-driven Software Engineer and Founding Developer with extensive experience in full-stack, mobile, and cloud platforms. Specializes in designing and developing scalable, secure mobile applications for iOS and Android using Swift, Objective-C, Java, and Kotlin. Proven expertise in leading end-to-end product development and cloud deployment with AWS and GCP. Adept at Agile/Scrum methodologies, DevSecOps, and CI/CD pipelines. Successfully delivered high-quality mobile applications, optimizing performance and ensuring compliance with app store guidelines.

Skills

- **Languages**: Kotlin, Java, Swift, Objective-C, Python, JavaScript (ES6), TypeScript, HTML5, XML, SQL, Shell scripting, PowerShell
- **Mobile**: Android SDK, Jetpack Compose, ViewModel, LiveData, DataStore, RoomDB, Navigation, Retrofit, OkHttp, RxJava, Coroutines, Dagger/Hilt, React Native
- **Web & Backend**: React, Next.js, Angular, Node.js, Express, Flask, Django, Spring Boot, REST, GraphQL
- **Databases & Cloud**: PostgreSQL, Oracle, MongoDB, Redis, Supabase, AWS (RDS, Secrets Manager, EC2, S3), GCP, Render, Vercel
- **DevOps & Tools**: Docker, Kubernetes, Jenkins, GitHub Actions, Maven, Gradle, SonarQube, CI/CD, Git, Bitbucket, Jira, Confluence, Terraform, Ansible, Containerization
- **Testing**: JUnit, Mockito, Espresso, Robolectric, Selenium, Postman
- **Other**: LaTeX (PDF generation), Tableau, Power BI, Agile Scrum, DevSecOps
- **Cloud Deployment**: Managed cloud deployment workflows, optimizing resource allocation and reducing costs by 20%, saving approximately $50,000 annually
- **Agile/Scrum**: Extensive experience in Agile/Scrum environments, participating in sprint planning, daily stand-ups, and sprint reviews

Experience

- **Fumble Labs** — Philadelphia
  Founding Developer — *Jan 2024 – Present*
  - Founded and led development of Resum8, an AI-powered resume optimization platform, leveraging Flask, Python, PostgreSQL, React/Next.js, and Docker.
  - Designed and deployed a resume parsing and PDF generation pipeline integrating LaTeX, ATS keyword extraction, and job description analysis.
  - Orchestrated cloud deployment workflows with Render, Vercel, and Supabase, establishing CI/CD pipelines and secrets management.
  - Built and maintained API-driven client applications for organizations such as University City District, delivering tailored web platforms that increased user engagement by 30%.
  - Delivered cross-platform mobile and web solutions, applying Kotlin/Java for Android, React Native for mobile prototypes, and GraphQL/REST APIs.
  - Coordinated product direction, branding, and UX decisions, while balancing client contracts with Fumble Labs' in-house product roadmap.
- **JP Morgan Chase & Co** — Wilmington, DE
  Software Engineer II, Reference Data — *Aug 2023 – Jun 2024*
  - Maintained and enhanced legacy enterprise Java applications, ensuring robust performance, security, and optimized compute costs.

- Developed and implemented new features in Spring Boot, React, Java 11+, Kotlin, Maven, Gradle, and REST APIs, enhancing user experience and system reliability.
- Utilized SQL, Oracle DB, PostgreSQL, Kafka, JMS, Redis, Docker, Kubernetes, Jenkins, GitHub Actions, AWS, and GCP to deliver scalable services.
- Built comprehensive test coverage with JUnit, Mockito, Selenium, and Postman for both backend and frontend services.
- Managed CI/CD pipelines, enforcing code quality standards via SonarQube, Checkstyle, and PMD, and maintained technical documentation.
- Collaborated within Agile teams using Jira, Confluence, Bitbucket, Git, and Scrum methodologies, leading to improved deployment efficiency and system reliability.

- **Wells Fargo** Remote/San Francisco
  Android Developer *Dec 2021 – Jul 2023*
  - Led the full redevelopment of the Android application, transitioning all features from Java/WebView to full native Kotlin functionality, resulting in a 25% increase in app performance.
  - Built and optimized features using Android SDK, Jetpack Compose, ViewModel, LiveData, RoomDB, DataStore, Retrofit, OkHttp, RxJava, Coroutines, Dagger/Hilt, and Navigation Component.
  - Monitored performance and crash data with Firebase Crashlytics, Google Play Console, New Relic, and Splunk for a live application with 10M+ downloads.
  - Collaborated closely with design and business teams using Figma, Jira, Confluence to launch the new LifeSync financial planning tool, integrating dynamic dashboards and live investment data.
  - Ensured high-quality delivery through Espresso, JUnit, Robolectric, Mockito testing frameworks and CI/CD pipelines via Jenkins, GitHub Actions.
  - Practiced Agile Scrum, contributing to sprint planning, code reviews, and release management.
- **Rave Business Systems** Philadelphia
  Mobile Developer *Aug 2021 – Dec 2021*
  - Developed cross-platform mobile applications using Kotlin, Java, and React Native, with integration of Redux for state management.
  - Leveraged Jetpack architecture components (Compose, ViewModel, LiveData, DataStore, RoomDB, Navigation) for scalable app architecture.
  - Integrated APIs using Retrofit, OkHttp, and GraphQL, reducing system runtime and improving maintainability.
  - Collaborated via GitHub, Jira, and Agile workflows, and deployed apps to both Play Store and App Store.
- **Pathrise** Remote/NYC
  Software Engineer *May 2021 – Aug 2021*
  - Built and deployed scalable full-stack web applications using React, Node.js, Express, MongoDB, and Redux.
  - Defined scopes, requirements, and user stories with cross-functional teams, aligning technical deliverables with business needs.
  - Developed RESTful APIs and integrated them with frontend components, improving performance and reliability.
  - Applied Git, Agile methodologies, and CI/CD practices to streamline project delivery.
- **UnitedHealthcare** Remote
  Android Developer *May 2018 – Oct 2019*
  - Developed and maintained native Android applications in Java and Kotlin, implementing new features and UI components following Material Design and company accessibility standards.
  - Integrated RESTful APIs and secure authentication flows with OAuth2 / JWT, improving data reliability and reducing network errors across multiple product releases.
  - Collaborated with cross-functional teams to optimize app performance and ensure HIPAA compliance, achieving measurable gains in stability and user satisfaction.

- **La Colombe Coffee Roasters** Chicago
  Data Developer, QA, Production *2014 – 2018*
  - Designed and implemented a comprehensive data management system, integrating data from multiple sources to monitor quality metrics across 30+ locations.
  - Developed automated data pipelines in Python, SQL, and Excel VBA, reducing manual effort and errors.
  - Built dashboards with Tableau, Power BI, and Google Data Studio for real-time insights into quality and sales trends.
  - Improved operational efficiency and reporting accuracy across departments.

Education

- **Temple University**: Computer Science
- **Thinkful**: Certificate, Full Stack Software Engineering Sep 2020 – Jan 2021
- **Washington University in St. Louis**: Art History 2009 – 2010
- **Lower Merion High School**:
